I know you probably are addressing this, but the bridge is not the only reason there is a problem with the congestion. One of the reasons the bridge gets so bad is the fact I-5 shrinks down to 2 lanes on the Oregon side around Delta Park. This is a key reason why it clogs so badly. So, the new bridge is absolutely needed but it will not be as effective as it needs to be unless something is done to expand the number of lanes on I-5 on the southern side of the river.
