concerned about property values going down
on this side because people will be
tending to move out.
So that's thanks for hearing me.
HAL DENGERINK: Thank you, Robert.
Carol.
CAROL PANFILIO: I am Carol
Panfilio, P.O. Box 6427, Vancouver,
Washington.
With this light rail project, the
cost is prohibitive for the amount of
benefit to the citizens of this community.
It's the most expensive Public Works
project in the Northwest history and the
light rail system is inflexible.
The politics in this project make the
bridge to Nowhere in Alaska pale to
comparison.
Thank you.
HAL DENGERINK: Leonard.
LEONARD BAUHS: Thank you. I am 🗲
Leonard Bauhs, 5210 Northwest Cherry
Street. I'm a proud and active resident
of Vancouver.
Very often we here primarily from

naysayers at public meetings like this. I am, however, a yea-sayer. I strongly support the idea of replacing the existing bridge spans and including light rail within the framework of the new.

I lived in the Washington D.C. Metro area for about eight years. During most of that time, I did not own a car. I walked, bicycled or rode the Metro Subway system. That rail system did not spring up in its entirety in a single moment, month or year and neither will ours.

But unlike the D.C. Subway, ours did not begin with a single lane between two points. It can begin with a connection to an existing large network of light rail and then grow within Vancouver and Clark County even as it continues to spread throughout the three counties we know as Portland.

With the promise of federal dollars now, we need to act now. We can not adequately visualize what the Vancouver Metro area will look like in 50 or 100 years.

By the earlier of the those dates, Clark County could very well have over one million residents. We are representing those tonight too; one million residents who are depending on us to make the right decision this year, and that decision should be to bring light rail across the new I-5 bridge.

Will our leaders today have the resolve to look 50 or 100 years into the future in the same way their counterparts did 50 and 100 years ago when the existing spans were built at great cost.

 $\ensuremath{\text{I'm}}$ a yea-sayer and $\ensuremath{\text{I}}$ say yes. Thank you.

HAL DENGERINK: Thank you. Okay. So we are going to switch out here again. This time with Rory Bowman, Tadd Hess and Joe Cortright. Okay. David Palenshus.

DAVID PALENSHUS: My name is David Palenshus. I live at 17111 Northwest 69th Avenue, Ridgefield, Washington.

I am a retired Commander of the United States Navy. I have seen a lot of transportation systems from Hong Kong to
