Comment or Question:

After briefly reading the Draft EIS, I believe that option 3 (replacement with light rail) is an essential transportation plan when considering the growth this region is expected to have in 20+ years. It integrates car, bus and larger mass transit light rail. I think that it will allow many options for residents to travel back and forth across the Columbia, rather than forcing them to make a decision to either go by car or bus (which could lead to traffic congestion issues in the future).
