Because it doesn't seem like we have a lot of wiggle room, if -- if we agree with what the consensus is from -- from organizations like the IPCC. That's all I got for tonight. Thank you very much.

MR. HEWITT: Thank you.

MR. LEWELLAN: My name's Art Lewellan. I live in Northwest Portland.

I want to speak in defense of building the light rail, I think, mainly before you here today.

I didn't really come very well prepared, so I'll just try to throw brief comments out.

As a transit user, I find that the distance that you can comfortably ride transit on light rail is twice that of what you can on the bus, and more comfortable. I've ridden through, you know, the bus system here and throughout the region, and I remember taking the bus out to Hillsboro before the light rail was built, and it was not a pleasant ride. It was bearable. But the ride -- If you want people to really use transit, comfort is a big part of that. And -- and then, you have to add the reliability. And on top of that, you -- (inaudible) an opportunity to change the way our region and all cities who apply it right to the way they develop and build the changes in it. It -- I

```
believe they will bring jobs up into Clark County.

And so, not only will Clark County folks commute and have a new way to get into town, reliably, comfortably on light rail; they will find jobs being created in our county, so there will be less need.

That is two ways that cars will be taken off the road.
```

I think light rail is our nation's Apollo project. It's -- it's harder than rocket science, I think, for the planning and developing, how we correct the mistakes of our past and improve on what we have and manage our economies. It's a real -- So, I wanted to get that in there.

And I also want to say, as a bicyclist, I don't have much of a problem with the rails on the street. You just have to be careful. I just wanted to add that. And I feel that, actually, riding around in Northwest Portland, I -- I appreciate those rails there, because traffic tends to stay on one side of the rail, whereas, the bicycles can stay on the other side. And so, I should feel safe riding down along the streetcar, because I figure the traffic is going to stay on the other side of the road.

So I wanted to make that comment, too.

```
1
   And I'm probably not saying all the things I
 2
   would've liked to say today in defense of it.
 3
   Building light rail is part of the project. But I
 4
   see my time's up. So, thank you.
 5
             MR. HEWITT:
                           Thank you.
 6
             Joel Batterman.
 7
             MR. BATTERMAN: Hi. My name's Joel
 8
   Batterman, and I live at -- currently at 6211
   Southeast 43rd, 97206.
 9
10
             MR. HEWITT: Could you speak up, please?
11
             MR. BATTERMAN: Sorry.
                                     I came to Portland
12
   pretty recently from the Detroit area, which, over
13
   the years has been quite steadfast in believing that
14
   adding highway capacity is the solution for
15
   relieving congestion. And over the years, of
16
   course, that's just been a quite disastrous policy.
17
   I don't want to bad-mouth all the work that people
18
   have done on this project. Certainly, mass transit
19
   and the bike/pedestrian improvements would be
20
   welcome. But I just think that the additional auto
21
   traffic would cancel out those gains. And I don't
22
   think I can support any of the alternatives
23
   proposed.
             Just because, in the long run, adding
24
   freeway capacity to relieve congestion just isn't a
