**Comment or Question:**

Utilizing old bridges may cost less, but retains the opening and closing - traffic backup problem. With two 108 ft wide bridges, six lanes of traffic (lanes 1-6 from inside) could be available with one lane of rapid traffic and one lane of buss traffic located on the outside as lanes 7 & 8, and a wide pedestrian/bike path located on the very outside as lane 9. This would give all transportation usage, and eliminate the need for a third bridge.  
Best Wishes, Tom
