**PORTLAND FREIGHT COMMITTEE**

June 30, 2008

CRC Task Force Co-Chairs Hewitt and Dengerick  
Columbia River Crossing  
700 Washington Street  
Vancouver, WA 98660

Dear CRC Task Force Co-Chairs Hewitt and Dengerick:

The Portland Freight Committee (PFC) appreciates the opportunity to provide the following comments regarding the Columbia River Crossing Draft EIS. The PFC is advisory to Portland City Council and its membership includes 30 private sector representatives of freight service providers, shippers, trade associations and businesses directly related to multi-modal freight activities. Our roster is attached.

The PFC views the CRC as the most important transportation project presently under consideration in this region. Interstate 5 is the only continuous north/south interstate highway on the West Coast, linking the United States, Canada and Mexico. The June 24, 2008 vote by the CRC Task Force to recommend the replacement bridge with light rail transit as the locally preferred alternative in the Draft EIS further demonstrates that these alternatives would provide the most benefit to the region. The replacement bridge provides more congestion relief, better safety, river navigation improvements, less seismic vulnerability, and less impact on water quality than the supplemental river crossing. The light rail transit alternative provides better travel times, greater reliability, more direct access to key transit markets, and attracts more transit riders than the bus rapid transit (BRT) alternative.

Safety is extremely important to the members of the Portland Freight Committee. The stretch of I-5 within the project area, including the existing bridges and interchanges, has crash rates nearly 2 ½ times higher than statewide averages for comparable facilities. Not only is the high crash rate unacceptable from the standpoint of bodily injury and property damage but it contributes greatly to the congestion problem. Another safety issue is that the existing bridges do not meet seismic standards and there is not a cost effective way to upgrade them. The loss of either bridge due to an earthquake would have catastrophic consequences for the entire West Coast.

In economic terms, I-5 is a critical piece of real estate for Oregon and Washington. All freight flow – international, national, West Coast, and regional - is dependent on the daily function of the I-5 freeway. The bridge influence area is particularly important because it provides the main freight access to the Rivergate/Columbia Corridor Industrial Districts, which include the Port of Portland's intermodal marine terminals, and its international airport in North Portland, and the Port of Vancouver in Washington. In the Rivergate/Columbia Corridor alone, 47,000 jobs were

reported in the manufacturing, distribution and service sectors in 2004. There are no other major highways that provide ready access to this vital economic area.

Currently, about 70 percent of the regional freight tonnage moves by truck. Scheduling predictability is critical to meet the demands of freight customers. The increasing hours of congestion around the Columbia River bridges make it increasingly difficult to meet scheduling requirements. Most of the truck trips moving through the bridge area either originate or terminate in the bridge influence area. Continuing three through traffic lanes in each direction, as recommended by the CRC Task Force, along with the additional auxiliary lanes and redesigned interchanges will more efficiently and safely move traffic on and off of I-5 and provide the additional capacity necessary to reduce traffic congestion. In addition, the provision of light rail transit, coupled with a variable rate tolling strategy and improved bicycle and pedestrian facilities, will reduce automobile trips and further reduce traffic congestion along the I-5 corridor.

Many citizens, including members of the Portland Freight Committee, have expressed concerns about the projected cost of a new bridge. It is important to point out that the bridge span itself is estimated to be less than 1/3 of the total project cost. The new interchanges, light rail transit service and improved facilities for bicyclists and pedestrians all add significantly to the cost. The old bridge has lasted over 90 years. A new bridge will likely last for 100 years or more. To postpone the project for any length of time will only increase the costs. From the perspective of the Portland Freight Committee, an investment in the replacement bridge is an investment in the region's future.

The Portland Freight Committee supports the CRC Task Force Resolution that recommends a replacement bridge with light rail transit as the locally preferred alternative.

Sincerely,

Corky Collier  
PFC Chairman

Gary Eichman  
PFC Vice Chairman
