1
   is traffic there. There is congestion there.
 2
   I-5 Bridge is obsolete and outdated. There needs
 3
   not to be a drawbridge there on an -- on an
 4
   interstate of that capacity. I am in favor of the
 5
   new bridges with light rail, safer bicycle and
 6
   commute -- and pedestrian lanes. I -- I think that
 7
   it should be built ten years ago. I think today's
 8
   dollars is the best for our money. I think it needs
   to be underway right away. I -- I also don't
   believe that that should take ten years to build
10
   that. I think, if that bridge was to be devastated
11
12
   in some way along with the other bridge, that there
13
   would be some way to get that built quicker than ten
   years. I think that's way too long. That's all.
14
15
   Thank you.
16
             MR. HEWITT:
                          Thank you.
17
             Temple Lentz.
18
             MS. LENTZ: I'm Temple Lentz. I live at
19
   3612 O Street in Vancouver.
20
             And I would like to agree with the
   previous speaker, that it's actually reall
21
22
   heartening to hear positive comments tonight, which

replacement bridge with light rail going as far as we can get it.

The current bridge is already woefully congested, seismically unfit, and dangerous to bike or drive-across. Metro council members and certain writers call this "Washington's problem," and they're wearing blinders. And they're apparently unaware that the goods they buy, whether they're from Wal-Mart, Whole Foods, or the farmer's market, still need to actually get to market.

Further, the tax revenue Oregon receives from the so-called "tax dodgers" who work in Oregon but live in Washington is surely something they wouldn't like to lose. This is a regional issue, but affects all of us.

As to peak oil and related arguments, yes, a change is going to come. It's inevitable. But with -- along with change comes technology and adaptation, whether we're driving Cadillacs, Civic Hybrids, or electric cars, or if we experience a sea change and suddenly see seas of commuter bicycles, we are going to need a safe, structurally sound and regionally beneficial river crossing.

There are some concerns in Vancouver about transit running through downtown Vancouver, but we

need it. Business owners are reasonably
reasonably concerned about the effect during and
after construction. But having lived in Portland,
Chicago, and Paris, I believe they are mistaken.
Light rail encourages a pedestrian community, which
encourages commerce. As I ride my bike down
Vancouver's Main Street and see shuttered and
deserted businesses with ample parking in front of
them, I'm hard pressed to think that a system that
directly funnels people downtown is a bad thing.
This is an opportunity, not a restriction.

Further, concerns about increased crime in Vancouver with the introduction of light rail are ridiculous and carry no small hint of racism and classism. Controlling crime is about the community, not the transit.

Many people are suggesting a third bridge, an arterial bridge. Or, last night I even heard about the crazy arterial superhighway. None of those solutions solve the problem of this bridge, which is the matter at hand.

The CRC has done a great job over the last few years of researching needs and possibilities and boiling them down to what we see here. It's time now to move forward. Most of the options people are

proposing have already been considered and evaluated. It would be great if the CRC could design us a bridge that would be exactly what each of us want it to be. But until we develop a federal budget for magic, the CRC has done a good job, and we need to move forward. Thank you.

MR. HEWITT: Thank you.

I think what we're going to do is, we'll take the three people who are here, and then we'll take a break. Is that fine with you? So we won't call up the next three. We'll just take what we got.

And the next speaker at this first table (indicated) is Joe Morrison.

MR. MORRISON: Joe Morrison. I have a business at 1916 Main Street.

Somewhere along the way, I understood this thing is slightly political. And I criticize you people a lot about not paralleling I-5 and making this a rapid transit system, which it is not. What you're proposing is not a rapid transit system.

You've got many stops in downtown Vancouver -- three. You're looking at doing park and rides in downtown Vancouver. I have a real difficult time with that. But I found out that you weren't given
