Comment or Question:

A larger bridge span between WA and OR only addresses one issue and creates several others. Emphasis should be on alternative transportation and funneling traffic. A larger bridge will only create more traffic hassles on either side of the river, does nothing to curb pollution, global warming or expenditure of fossil fuels. Start today by making it a toll bridge, your use will drop. I encourage re-thinking the standard obvious answer that we are accustomed to - a bigger bridge isn't the solution.
