1. In Support of the following bridge options:
 None
 2. In Support of the following High Capacity Transit options:
 Light Rail between Vancouver and Portland
 3. Support of Bus Rapid Transit or Light Rail by location:
 Lincoln Terminus: Yes
 Kiggins Bowl Terminus: Yes
 Mill Plain (MOS) Terminus: Yes
 Clark College (MOS) Terminus: Yes

Comments:

- P-0081-002** Please reconsider the trajectory that the CRC project is on. It is quite possible to improve

P-0081-001

Preferences for specific alternatives or options, as expressed in comments received before and after the issuance of the DEIS, were shared with local sponsor agencies to inform decision making. Following the close of the 60-day DEIS public comment period in July 2008, the CRC project's six local sponsor agencies selected a replacement I-5 bridge with light rail to Clark College as the project's Locally Preferred Alternative (LPA). These sponsor agencies, which include the Portland City Council, Vancouver City Council, TriMet Board, C-TRAN Board, Metro Council, RTC Board, considered the DEIS analysis, public comment, and a recommendation from the CRC Task Force when voting on the LPA.

With the LPA, new bridges will replace the existing Interstate Bridges to carry I-5 traffic, light rail, pedestrians and bicyclists across the Columbia River. Light rail will extend from the Expo Center MAX Station in Portland to a station and park and ride at Clark College in Vancouver. Pedestrians and bicyclists would travel along a wider and safer path than exists today.

For a more detailed description of highway, transit, and bicycle and pedestrian improvements associated with the LPA, see Chapter 2 of the FEIS.

P-0081-002

The CRC project evaluated a wide variety of options for achieving its Purpose and Need, including extensive travel demand and system management strategies that would not involve rebuilding the I-5 bridges. These strategies would provide some benefits and are part of the CRC project, but without accompanying physical improvements and upgrades, they would do very little to address the stated needs of improving safety and mobility for traffic and freight, or the seismic vulnerability of the

existing bridges. The project will include tolling as a funding component and traffic management tool.

P-0081-002 | freight mobility and reduce CO2 emissions & congestion WITHOUT building a new freeway bridge. Please consider utilizing transportation demand management measures (like tolling and individualized marketing programs) along with enhanced transit and earthquake upgrades BEFORE building new lanes for auto traffic.
