P-0095-001

I got reply on my mail. Final EIS will be in 2009. Well, in more than one year how many hours vehicles will be idling on highways and burn up fuel, pollute air, consume the people's and businesses' time and money, and increase our dependency on foreign oil?

It is important that a project, such as CRC, provide ample opportunity for input from a diverse constituency of stakeholders and jurisdictions, and that it follow a process that complies with all federal, state and local legal requirements. The project sponsors intent is to progress at a deliberate pace to ensure that we meet public interests, meet the transportation needs, address the quality of local communities and the environment, and be financially and fiscally responsible. Following publication of the FEIS, there will be a record of decision. If that decision is to move forward with one of the build alternatives, then the sponsors will progress into final engineering, finance plan implementation, and then construction.
