Person:

Works in the project area
 Other - live in vancouver city

Person commutes in the travel area via:
 Car or Truck

P-0996-001

1. In Support of the following bridge options:
 Replacement Bridge
2. In Support of the following High Capacity Transit options:
 Light Rail between Vancouver and Portland
3. Support of Bus Rapid Transit or Light Rail by location:
 Lincoln Terminus: Yes
 Kiggins Bowl Terminus: Yes
 Mill Plain (MOS) Terminus: Yes
 Clark College (MOS) Terminus: Yes

Comments:**P-0996-002**

Future transportation issues in vancouver and clark county need to be addressed now. In

P-0996-001

Preferences for specific alternatives or options, as expressed in comments received before and after the issuance of the DEIS, were shared with local sponsor agencies to inform decision making. Following the close of the 60-day DEIS public comment period in July 2008, the CRC project's six local sponsor agencies selected a replacement I-5 bridge with light rail to Clark College as the project's Locally Preferred Alternative (LPA). These sponsor agencies, which include the Portland City Council, Vancouver City Council, TriMet Board, C-TRAN Board, Metro Council, RTC Board, considered the DEIS analysis, public comment, and a recommendation from the CRC Task Force when voting on the LPA.

With the LPA, new bridges will replace the existing Interstate Bridges to carry I-5 traffic, light rail, pedestrians and bicyclists across the Columbia River. Light rail will extend from the Expo Center MAX Station in Portland to a station and park and ride at Clark College in Vancouver. Pedestrians and bicyclists would travel along a wider and safer path than exists today.

For a more detailed description of highway, transit, and bicycle and pedestrian improvements associated with the LPA, see Chapter 2 of the FEIS.

P-0996-002

It is important that a project, such as CRC, provide ample opportunity for input from a diverse constituency of stakeholders and jurisdictions, and that it follow a process that complies with all federal, state and local legal requirements. The project sponsors intent is to progress at a deliberate pace to ensure that we meet public interests, meet the transportation needs, address the quality of local communities and the environment, and be financially and fiscally responsible. Following publication of the FEIS, there will be a record of decision. If that decision is to move

P-0996-003 fact, its a little late! Using a toll for the bridge is a good way to pay for the construction and upkeep since everyone that uses it including people that dont live here will get to pay for what they use and need.

forward with one of the build alternatives, then the sponsors will progress into final engineering, finance plan implementation, and then construction.

P-0996-003

Tolling was evaluated in the DEIS and FEIS, and included in the LPA for two important reasons. First, a toll may be necessary to pay for the construction of this project, as discussed in Chapter 4 of the FEIS. Second, a toll provides a valuable travel demand management tool that encourages travelers to take alternative modes (including light rail provided by this project), travel at off-peak periods, or reduce their auto trips. This demand management reduces congestion and extends the effective service life of the facility. When the existing I-5 northbound bridge was built in 1917, it was paid for with a toll. The southbound I-5 bridge, built in 1958, was also funded partially by tolls. In 2008, the Washington legislature passed enabling language for tolling on I-5, provided that each facility is later authorized under specific legislation. Once authorized by the legislature, the Washington Transportation Commission has the authority to set the toll rates. In Oregon, and the Oregon Transportation Commission has the authority to toll a facility and to set the toll rates.
