Comment or Question:

- P-1153-001** | I like this alternative the best. I believe that bus rapid transit is the best choice at this time. I honestly just feel like people in Clark County will not vote to pay for light rail when asked, but may vote to increase taxes or tolls to pay for express buses. I would suggest that the BRT bridge be built strong enough that light rail or streetcars could be added to it in the future. I would also suggest that carpools be allowed to use this dedicated transit bridge in addition to buses. Please make sure the bike/ped area is separated from the bus area by a very sturdy wall/barrier.

### P-1153-001

Following the close of the 60-day DEIS public comment period in July 2008, the CRC project's six local sponsor agencies selected light rail to Clark College as the project's preferred transit mode. These sponsor agencies, which include the Vancouver City Council, Portland City Council, C-TRAN Board, TriMet Board, RTC Board and Metro Council considered the DEIS analysis, public comment, and a recommendation from the CRC Task Force (a broad group of stakeholders representative of the range of interests affected by the project - see the DEIS Public Involvement Appendix for more information regarding the CRC Task Force) before voting on the LPA.

As illustrated in the DEIS, and summarized in Exhibit 29 (page S-33) of the Executive Summary, light rail would better serve transit riders than bus rapid transit (BRT) within the CRC project area. Light rail would carry more passengers across the river during the PM peak, result in more people choosing to take transit, faster travel times through the project area, fewer potential noise impacts, and lower costs per incremental rider than BRT. Additionally, light rail is more likely to attract desirable development on Hayden Island and in downtown Vancouver, which is consistent with local land use plans.

### P-1153-002

Light rail has been endorsed by every local Sponsoring Agency (Vancouver City Council, C-TRAN, RTC, Portland City Council, TriMet, and Metro), whose boards are comprised of the elected leadership of the region.

Annual light rail passenger trips crossing the I-5 bridge in 2030 are projected to be 6.1 million, with daily ridership around 18,700. The travel time for the morning commute by light rail between downtown Vancouver and Pioneer Square in downtown Portland will be approximately 34 minutes. Light rail would travel on a dedicated right-of-way, with more

reliable travel times than auto drivers dealing with unpredictable road conditions, traffic congestion, and parking challenges.

The CRC project planning for light rail incorporates and supports the principles of the Vancouver's City Center Vision Plan. Downtown Vancouver has seen recent growth in higher density mixed use projects from three to 12 stories in height. In addition, another 4,000 downtown condominiums are proposed or pending as part of new developments. The core of Vancouver has, along with many of the larger corridors such as Fourth Plain Blvd, medium to high density residential development and an urban mix of uses. Transit demand in these areas is quite high, and ridership will increase with the introduction of light rail.

Long-term operation and maintenance of the new light rail line will be funded through C-TRAN and TriMet. For its share of the operations and maintenance funding, C-TRAN plans on having a public vote.

### **P-1153-003**

Preferences for specific alternatives or options, as expressed in comments received before and after the issuance of the DEIS, were shared with local sponsor agencies to inform decision making. Following the close of the 60-day DEIS public comment period in July 2008, the CRC project's six local sponsor agencies selected a replacement I-5 bridge with light rail to Clark College as the project's Locally Preferred Alternative (LPA). These sponsor agencies, which include the Portland City Council, Vancouver City Council, TriMet Board, C-TRAN Board, Metro Council, RTC Board, considered the DEIS analysis, public comment, and a recommendation from the CRC Task Force when voting on the LPA.

With the LPA, new bridges will replace the existing Interstate Bridges to carry I-5 traffic, light rail, pedestrians and bicyclists across the Columbia River. Light rail will extend from the Expo Center MAX Station in Portland

to a station and park and ride at Clark College in Vancouver. Pedestrians and bicyclists would travel along a wider and safer path than exists today, separated from vehicle traffic and light rail vehicles. For a more detailed description of highway, transit, and bicycle and pedestrian improvements associated with the LPA, see Chapter 2 of the FEIS.
