I-1078-001 | If the Evergreen Pt Bridge is replaced, I support replacing it with no more lanes or capacity than the present four lane bridge. This is a state route that empties traffic onto I-5 and the city streets. I-5 is already operating at capacity. The only place that the traffic capacity from the proposed additional two lanes could go is onto the already over-crowded city streets which are not designed for more traffic. This is a safety concern for the Seattle City residents. For that reason, I reject the proposal for a six lane bridge.
