

AWV Draft EIS Comment Form Results:

Name: Melissa Cabal
Address: 1825 - 18th Avenue
City: Seattle
State: WA
Zip Code: 98122
Email: melissa@reidcm.com
Affiliation (optional):

Would like to be added to the project mailing list?

Yes

Project Comments:

The EIS needs to analyze what is likely the simplest, cheapest, and least disruptive solution -- fixing the larger transportation network instead of building a new highway. PLEASE do not allow construction of an alternate bypass tunnel. The focus should be to build a park in place of existing overpass and focus on a subway system for transportation needs. alternatives just won't cut it for our city.

Overall Project

I-103-001

Many people asked the lead agencies to consider an alternative that would remove the viaduct and replace it with a four-lane surface roadway along Alaskan Way and include transit improvements. Without a host of improvements and modifications, a four-lane Alaskan Way would create even more congestion on I-5 and downtown streets than the alternatives evaluated in the Draft and Supplemental Draft EISs. Transportation studies performed for this project indicate that replacing the viaduct with a four-lane surface street would substantially increase congestion for most of the day and part of the evening on I-5 through downtown Seattle, downtown streets, and Alaskan Way. On downtown streets, traffic would increase by 30 percent; though traffic increases to specific areas like Pioneer Square and the waterfront could exceed 30 percent. With a four-lane roadway, traffic on Alaskan Way would quadruple to 35,000 to 56,000 vehicles per day compared to about 10,000 vehicles today. This traffic increase would make Alaskan Way the busiest street downtown, carrying more traffic than Mercer Street does today. The increased traffic congestion would also make travel times worse for buses, making transit improvements along these streets largely ineffective. Finally, neighborhoods west of I-5 (Ballard, Queen Anne, Magnolia, and West Seattle) would be less accessible and would face longer commute times.
