**Comment Summary:**

Pacific Street Interchange Option

**Response:**

See Section 1.2 of the 2006 Draft EIS Comment Response Report.

**I-0537-001** | Please make sure the Pacific Interchange alternative, which is the only 520 option I support, is designed to minimize the number of cars that use the ramps from the Arboretum as a shortcut to the University. I think this can be achieved by either collecting the toll from all cars entering the ramp whether or not they go onto 520 or by signage / designated lanes which prevent through traffic.

To address the concerns of the Arboretum supports we need to make sure that no more traffic will go through the Arboretum with the Pacific Interchange than will go through the Arboretum with the Base 6 lane option.

Thank you.  
Fred Ringenburg
