P-0798-001 How do you propose to keep traffic moving any better than it does now if you want everyone to stop and pay a toll? when I use to cross with the toll before it did slow traffic.

P-0798-001

Details and policies for the tolling system will be decided by the transportation commissions and legislatures of both states. However, the project has proposed and assumed that an electronic tolling system will be used. Electronic tolling collection (ETC) is a cashless toll collection system using the latest electronic technology. ETC promotes free-flowing traffic by eliminating the need for toll booths and allowing all vehicles to pay a toll without stopping.

ETC systems in use today allow drivers to purchase an inexpensive, credit card sized transponder that is placed on the inside windshield of their car. When driving through the toll collection point, radio equipment above the road scans the transponder and deducts the toll from the user's account. User accounts could be linked to a credit or debit card, or they could be prepaid.

Infrequent travelers without a transponder would be charged via a video camera that can quickly scan and photograph license plates. A bill for the cost of the toll and a processing fee can be sent to the registered vehicle owner.

All personal information necessary to use the ETC system would be maintained by the State DOT, as is now being done with WSDOT's Good To Go! Program that is collecting tolls for facilities such as the Tacoma Narrows bridge. The use of this information, like all personal information provided to the state, will follow state privacy guidelines.
