P-1178-001

Comment or Question:
Suggest building both new bridges separate, parallel, and outside of the existing bridges, and then remove the old bridges, leaving a spacious open feeling for drivers and all viewers of the modern new bridges. Tom

P-1178-001

The new I-5 bridges will be constructed downstream (west) of the existing bridges. They will be constructed parallel to each other to minimize the total overall footprint of the bridges over the Columbia River. Once the new bridges are constructed and traffic is transferred onto them, the existing bridges will be demolished.
