

WASHINGTON STATE DEPARTMENT OF TRANSPORTATION

Data maintained currently by the Travel Data and Analysis branch of WSDOT.

For questions about this information email Ken Lakey at Lakeyk@wsdot.wa.gov.

The **PTRBicyclePedestrianCount** data is stored in a relational database, which we have exported for download into comma separated value (csv) files. You can choose to download all the data at once, in a single flat file or download individual files to recreate the database. You then can download the updates as needed. The data are refreshed weekly.

There is a PDF diagram of the database structure included in this folder.

PTRBicyclePedestrianCount.zip: contains all the data in the database joined (de-normalized) into a single flat file presentation.

PTRBikePedCount.zip: Header information for the count to determine, location, counter used and time period of counts for the automatic counters.

PTRPedCountDetail.zip: The actual count data from the automatic counters of bikes/pedestrians that used the trail at a given time.

PTRBikePedestrianLane.zip Name, description and number of lane used in the traffic monitoring count for the automatic counters.

PTRBikePedLocation.zip: Specific count Location/Intersections in the city where bicyclists and pedestrians are expected to be counted and where counters can be positioned.

PTRBikePedTrafficRecorder.zip: Holds information regarding a specific automatic data collector.

PTRBikePedTransitType.zip: Records of each passing cyclist, pedestrian, or other non-motorized transit. People in wheelchairs are counted as pedestrians. People walking their bicycles count as bicyclists. People on rollerblades, skateboards, scooters, and other non-motorized transport devices are to be counted as "Other".
